

External Storage Policy

Last updated: June 2026

This policy explains that some of the Forum's data is stored and processed outside the Roblox platform, on external systems that we and our service providers operate, and sets out exactly what that data is, where it is kept, and how it is protected. It adds detail to the Privacy Policy and forms part of our Terms of Service.

1. Why we use external storage

The Forum keeps a large amount of community history, including topics, replies, reports, and moderation records, and it needs to store that history reliably, search it quickly, and serve it across many servers and sessions. Roblox's own data storage is not designed to do all of this on its own, so in addition to it we run our own backend on external infrastructure. This lets the Forum keep your content available, maintain history and edit records, power search and recommendations, keep the community safe, and prevent abuse.

2. Where the data is stored

Our backend runs on Amazon Web Services (AWS) in the European Union, and the Forum reaches it through a gateway operated by Cloudflare. Your data is held in databases and a search index hosted on AWS. Amazon Web Services and Cloudflare are global organisations, so a limited amount of processing, such as routing and security at the Cloudflare gateway, may take place outside the EEA. Where personal data is transferred outside the EEA, we rely on appropriate safeguards as required by applicable law.

3. What data is stored externally

The data we store on our external systems is the limited Forum data described in the Privacy Policy. It consists of:

- The topics and replies you post, including their titles, text, and tags, and the edit history of that content;
- The Roblox user ID and username used to attribute and display your content;

- Your activity in the Forum, including the accounts you follow and who follows you, your notifications, and like and view counts;
- Reports that you submit or that concern your content, including the reason and any description you write;
- Our moderation records, including warnings, mutes, bans, and the reasons and durations attached to them, and any appeals you submit, including the reason you write;
- Support requests you open, including the category, the device information you provide, your description, and the messages exchanged with our staff; and
- A one-way hashed identifier that we may store to enforce a permanent removal where one applies. This is a hash, not a readable account ID.

4. What is not stored externally

We do not store, because we never receive it, your real name, email address, password, phone number, postal address, payment information, precise location, or IP address. If you make a purchase, it is handled by Roblox, and we do not receive or store your payment details. Your personal recommendation and interest profile, and your like, bookmark, block, and following lists, are kept in Roblox's own data storage rather than on our external systems. Please do not post personal information of this kind on the Forum.

5. Who can access it, and our providers

Access to externally stored data is limited to our staff and to the providers that run the infrastructure, and only as needed to operate and secure the Forum. Our providers are Amazon Web Services, which provides the storage, search, and computing, and Cloudflare, which provides the gateway and helps protect the Forum against abuse. We do not sell this data, and we disclose it only as described in the Information and Legal Requests policy or where required by law.

6. Legal bases and your rights

We store this data on the same legal bases set out in the Privacy Policy, including the performance of our agreement with you, our legitimate interests in operating and securing the Forum, and compliance with our legal obligations. Your rights under the Privacy Policy, including the rights to access and to erasure, apply to

data held on our external systems.

7. What happens when you erase your data

When your data is erased, your follows, notifications, appeals, and support requests are deleted, and your topics and replies are anonymised, which means your Roblox user ID and username are removed from them and replaced with a non-identifying label, so the text may remain but is no longer linked to you. Reports and moderation records that reference you are anonymised in the same way. We may keep the one-way hashed identifier described above in order to enforce a permanent removal. Your interest profile and your personal lists held in Roblox's data storage are erased through Roblox's own deletion process. You can request erasure through the Forum's in-game support system, or through Roblox where it forwards your request to us, as described in the Privacy Policy.

8. Security

We protect externally stored data using reasonable technical and organisational measures. Data is sent over encrypted connections, access is restricted, and the gateway and backend authenticate each other so that the Forum's systems are not exposed directly. No method of storage or transmission can be guaranteed to be completely secure. If a data breach affecting this storage occurs, we will act in line with applicable law.

9. Retention

We keep externally stored data for as long as it is needed to run the Forum and to provide your account. Anonymised content may remain after erasure in the form described above. Safety and moderation records may be kept for longer where this is necessary to keep the Forum safe, to prevent ban evasion, to resolve disputes, or to comply with the law.

10. Changes to this policy

We may update this policy from time to time. If we make changes, we will post the updated policy and change the "Last updated" date at the top. By continuing to use the Forum after the changes take effect, you accept the updated policy.
